

## Machine Access Control Boxes

**Update: March 23 2022**

Progress continues.

Prototype units remain in production essentially trouble-free. Production prototypes are in construction, built on circuit boards revised based on prototype testing. These boxes will be deployed for testing in the next month. Because they will not have override buttons, they will be removed after brief testing, said testing will not disrupt normal machine usage.

iOS app is ready to be submitted to the Apple app store. I need the Web Privacy Policy approved and added to our website before I can submit (it is an Apple (bless their hearts) requirement). Android and PC versions are complete and ready.

<b>Machine Access Control Boxes</b>			
10/2021 Approved Budget	Spent	% Budget Spent	% Project Completion
\$3,900.00	\$0.00	0%	35%

Potential bottleneck: Creation and location of Authorized Users Data Base. I know some work is in progress. I will need access to the data in order for the control boxes to auto update and accept current and newly authorized users.
