Tooling Available

General Guidelines

- Do no use 2-3 flute endmills on steel
- Do no use ZRN or Other Aluminum coated endmills on steel. AKA if it is coated do not use. Gold is ZRN coated
- Do not use aggressive feeds and speeds. Keep it low and slow until you are 100% sure
- Do not take super light passes and grind away. This is bad for the endmill
- Most of the tools pre-loaded are for aluminum or plastic do not use them for steel. Over time we will add steel tools to the mix. For now please work with the Tormach manager
